

Case study Chemical & residue-free pesticide

A revolutionary technology concept made reality

Our client had identified an exciting new technology concept. However there was a wealth of scientific barriers to its market realisation

Approach

The chemistry team at Sagentia undertook:-

- A feasibility study to determine the fundamental complications and unforeseen issues with the concept
- Broad research to identify the suitable chemistries and formulations that could mitigate the drawbacks
- Experimentations with various formulations to prove the principal of the concept

Benefit

- Validation of the efficiency of the technology through biological testing in Sagentia's own labs
- The client now has the confidence to take the technology concept to the next level of development and is moving towards market realisation
